Students could understand the relevance of organic farming & processing of various products. Besides, students participated in plantation drive in MIYAWAKI FOREST. Gap filling by the plants provided by Department of Forest & Wildlife Preservation, Govt of Punjab on highly subsidized price.

AMRIT MITTI PREPARATION AT YELLOW POINT FARM & FARMER'S MEETING IN VILLAGE NIMATPURA, DISTRICT PATIALA, PUNJAB

Dated: 23 Feb 26 to 22nd Mar 26

Venue: Yellow Point Farm & Village Nimatpura Khera, Patiala, Punjab

Background: Agricultural resilience for soil health refers to farming practices that maintain and improve soil fertility, structure, and productivity over time. Healthy soil helps crops withstand droughts, floods, pests, and climate change impacts. Practices like organic farming, crop rotation, mulching, and reduced chemical use enhance soil nutrients and microbial activity. Strong soil health ensures sustainable agriculture, better crop yields, and long-term environmental balance. Amrit Mitti is a step ahead towards organic farming.

ACTIVITIES:

50 farmers of Adopted village Nimatpura Khera were addressed by Mr. Sube Singh (Deputy Manager – Yellow Point Farm). Technical Know-How was transferred to the selected farmers. They were taught about the method, objective & advantages of using amrit mitti in their respective fields.

Farmers raised lot of queries regarding amrit mitti. They showed their interest in preparing amrit mitti for producing high yielding crops with superior quality produce. The ingredients used for preparing amrit mitti were Cow Urine, Cow dung, Gur, Water, Parali & soil.
